## Fast Bit Counting

## **Time limit:** 0.5s **Memory limit:** 64M

Given 64-bit unsigned integers, count the bits set in each one.

## Implementation

One function:

```
int setbits(unsigned long long);
```

Your function may be called up to  $10^8\,\mathrm{times}.$ 

## **Constraints**

Your code must be less than 560 characters in length. 560 characters is plenty for any sane solution. Otherwise, only half of the points are awarded.
